The [KREO Transformers](#) was amazingly reliable and could quickly stand by itself. The variety of motions on the legs was excellent, despite the fact that there was a piece for the bottom of your torso that may regularly fall off as a result of the stress from the legs. The array of motions to the arms was ok. The elbow joint to the arm was at a strange angle and so the arms didn't transfer up down, they move out towards the aspect. The recommendations clearly present the arms being straight down on side in the figure. But because of the wheels and layout of the arms there's no approach to obtain the arms straight down about the aspect.

For any lacking element, if there was indeed a single, the representative offered to ship me a prepaid label to ship the product or service again plus they would ship a replacement. This alternative operates when the original set was an anomaly, but if production course of action was mistaken the many sets might be missing the piece.
