# **Swiss Army Men's Watch - Bring Style To Your Outfit With These Watches**

You'll find that Swiss Army watches are just as useful as their better known relative, the Swiss Army knife. Whereas the knife comes with all of the different tools one might ever need to puncture or cut an item, the watch comes with all of the logistical information one could ever want to know. One benefit of the watch, though, is that it fits in better as a decorative piece.

The watch is a 'Swiss Army' product because of the many different tools the watch face has. The band or aesthetic design of the watch is more subject to tastes and will not affect its usefulness. Men and women can, therefore, have multi-purpose watches that could survive the harshest environments, but have it still look appropriate for any formal event. The styles range from heavy-duty leather to small and delicate platinum bands. There are even pocket watches available with all the Swiss Army convenience.

There are many different things you can get on the analog watch face. The watches do not come digitalized. The date is usually recorded. There is also a chronograph, which most people know as a stop watch. This is a huge leap forward for analog watches, since it is mostly digital watches that have them.

There are some very convenient features provided. The watches are usually waterproof and have impact-resistant faces to increase durability. If you intend on diving with these watches, make sure you know the range of depth. They may only be waterproof up to a certain depth and the face may crack under the water pressure. There is also a light-up option for the face so you need never worry about not being able to see your watch in the dark. The light can either be a gentle glow or so bright you could use it as a very dull flashlight in an emergency.

The preferred design is to have the back be made of a transparent crystal, just like the face of the watch. This makes things a great deal easier when it comes to repairs. One may be able to spot the issue before the watch is even opened. They use crystal because it is harder to scratch than glass. This is also why stainless steel is a favorite material above silver and gold - it resists dents and scratches.

Many of them are made with alarm options. They are some of the few non-digital watches in the world that have alarm capacity. This is why so many people choose to use their cell phones instead of wearing watches anymore: the cell phone plays triple duty as a phone, a watch, and an alarm clock. Watches regained a degree of popularity when the alarm was made available.

For the frequent traveler or for people who have frequent contact with those in other time zones, these watches can have up to three smaller faces on the large face. It will make it easy to compare time differences without having to do quick math or reset your own watch. Those in business who have off-shore partners find this feature to be invaluable.

A Tachymeter Scale can also be included. Athletes tend to love this, since it allows them to track their speed. It is a wonderful feature to have when going for a jog. Look carefully through the catalog of [Swiss Army mens watches](#) at your jewelry store to see all of the different tools you can include in your own [man's watch](#).
